

Weave a nature loom

You need

- twine
- four sticks
- items found in nature

- make a frame by attaching the sticks together at each corner with the twine in a criss-cross fashion
- once your frame is finished, tie a piece of the twine around one of the corners and begin wrapping it around the frame until the frame has lines of twine across it.
- by wrapping the twine twice around the stick helps to keep the twine taught and prevent it from sliding on the sticks.
- secure by knotting.
